Part 1: ATHL Platform

What is the ATHL platform?

The ATHL fan token platform is a fundraising and fan engagement tool designed for athletes and creators at all levels—from high school to professional to seniors. It allows these "issuers" (athletes and creators) to sell their own digital fan tokens directly to their supporters and followers on social media. This platform helps issuers fund their careers and provides a way for fans to engage with and support them in a new way while also giving fans a chance to make money through fan token appreciation.

What problems does the ATHL platform solve?

Traditionally, athletes and creators face significant financial hurdles.

- **For Athletes:** Financial success is often limited to those in popular sports who secure major contracts or sponsorships. Many talented athletes in niche sports or those early in their careers lack access to funding and respectful ways to raise funds from followers.
- **For Creators:** Building a large following and securing sponsorships can take years. Monetization often relies on promoting third-party, unrelated products, which can feel inauthentic and is a very indirect way for fans to show support.
- **For Fans:** Some famous people have launched their own token but historically the fan experience has been filled with rug-pulls, copy-casts, scams and a lack of ongoing issuer support.

For Issuers, ATHL offers a significantly better alternative by enabling direct fundraising through fan tokens. Success is not solely tied to competitive wins but can also stem from personal marketing, entertainment value, social media skills, personality, informative content, or support for causes.

For Fans, this platform employs a number of guardrails to prevent rugpulls and scams. The platform also incentivizes issuers to utilize their token as a self funding and engagement tool for life by maintaining and increasing buying demand.

This broadens income opportunities, allowing issuers to maintain earnings even during off-periods by providing ongoing value to fans.

How do fans benefit from buying ATHL fan tokens?

Fans who purchase fan tokens on the ATHL platform benefit in three key ways:

1. **Support a Dream:** Fans can directly contribute to the dreams and journey of an athlete or creator they believe in, similar to a platform like GoFundMe.
2. **Gain Access & Perks:** Issuers can offer exclusive content, access, or other benefits to their token holders, creating a closer connection, similar to Patreon.
3. **Potential for Financial Upside:** If the athlete or creator grows in popularity, demand for their limited number of tokens may increase. This could increase the value of the tokens, similar to collecting popular trading cards or other assets.

ATHL provides a structured mechanism for direct fundraising from fans, combining elements of crowdfunding, subscription models, and tradable assets. This allows issuers to share their goals and offer benefits to supporters, while giving fans a way to engage more deeply and potentially benefit financially from the issuer's success.

How Does ATHL Empower Athletes and Creators to Pursue Their Passion?

The traditional path to a professional career as an athlete or creator is often long and financially uncertain. Success typically depends on securing corporate sponsorships, winning major contracts, or slowly building an audience for ad revenue—all of which can be out of reach for emerging talent that lacks the extensive time and financial resources necessary to achieve greatness.

The ATHL platform fundamentally changes this dynamic by providing a direct path to community-driven funding. This allows issuers of all ages and skill levels to gain the financial resources needed to invest in their careers, reduce dependency on part-time jobs, and focus fully on their passion.

Here's how this works for different types of issuers:

For the Developing Athlete (e.g., Grade School, High School, College or Amateur Level)

For a young athlete, access to resources can be the single biggest factor in reaching the next level or even the ability to participate. Community funding through ATHL can directly translate into a competitive advantage.

- **Equipment:** An athlete can now afford high-performance gear, from a custom-fitted bicycle for a triathlete to professional-grade skates for a figure skater.
- **Advanced Coaching:** Funds can be used to hire specialized coaches (e.g., a pitching coach for a baseball player, a gymnastics choreographer) who provide elite-level instruction.
- **Competition and Travel:** Funding can cover entry fees and travel costs for crucial national or international tournaments that are essential for gaining experience, exposure, and ranking points.
- **Health and Conditioning:** Proceeds can pay for sports nutritionists, physical therapists, and gym memberships to optimize physical development and prevent injuries.

By removing these financial barriers, ATHL allows promising young athletes to compete on a more level playing field, where their success is determined by talent and dedication, not their family's financial situation.

For the Niche or Professional Athlete

Many athletes, even at the Olympic level, compete in sports with limited prize money and media coverage. They often have to balance a full-time job with a demanding training schedule.

- **Focus on Training:** ATHL funding can supplement or replace income from a day job, freeing up invaluable time and energy. An athlete can transition from training 15 hours a week to 30+ hours a week, enabling them to focus completely on their sport.

- **Building a Support Team:** A professional athlete can afford to build a team around them, including specialized coaches, a sports psychologist, and other support staff crucial for high-level performance.
- **Career Longevity:** In case of injury or a mediocre season, an athlete's income isn't solely tied to performance. They can continue to deliver engagement value to their community and earn revenue through their fan token sales, providing stability during recovery or off-seasons.

For the Creator (e.g., Filmmaker, Musician, Artist)

Creators often face a long "grind" to reach a point where their passion can become a sustainable career. They may have to take on unrelated freelance work or create content dictated by algorithms rather than their creative vision.

- **Executing Ambitious Projects:** A filmmaker can raise funds to produce a high-quality short film, a musician can fund a professionally recorded EP, and a streamer can upgrade their entire production setup. This allows them to create a standout piece of work that accelerates their career growth.
- **Creative Independence:** With direct funding from their community, creators are no longer solely reliant on brand deals that may not align with their values. They can maintain creative control and produce more authentic work for the audience that supports them.
- **Bridging the Income Gap:** For a creator who is just starting to see traction, token revenue can bridge the financial gap, allowing them to go full-time on their creative work months or even years earlier than they could with ad revenue alone.

In short, ATHL provides the capital to turn potential into reality. It empowers issuers to invest in themselves, take on bigger challenges, and build a sustainable career on their own terms, backed directly by the fans who believe in their journey.

Part 2: For Fans - Getting Started

How do I create an account?

Go to www.athl.live and select "Fan" to create your account. You will be prompted to enter some basic information to complete the registration process. You will be asked for

- Name
- Age
- Email address
- Social media account authentication

You will then be given the opportunity to fund your ATHL wallet so you can begin purchasing fan tokens.

Funding Your ATHL Wallet & The Role of A-Bucks

To buy fan tokens, you first need to fund your account. We've designed a simple, three-step process to make this as easy as possible. Every user account comes with a secure digital wallet to hold your funds and your fan tokens.

Step 1: Load Your Wallet with USDC

The first step is to add USDC, a popular digital dollar, to your ATHL wallet. You have several easy ways to do this:

- **Credit/Debit Card:** Use your card just like any other online purchase and you can use Apple/Google pay to make the process easier.
- **Bank Transfer (ACH):** Connect your bank account for direct transfers.
- **Crypto Transfer:** Send USDC or other cryptocurrencies from an external exchange (like Coinbase) or another wallet directly to your ATHL wallet address.

When you go to add funds, the platform will show you a simple menu of these options. You will see exactly how much USDC you will receive for your purchase, with any provider fees (like credit card fees) already calculated for you.

Step 2: Convert USDC to A-Bucks

Once you have USDC in your wallet, the next step is to buy A-Bucks.

- **What are A-Bucks?** A-Bucks are the official currency of the ATHL platform, used to buy all fan tokens. They are pegged 1-to-1 with the US Dollar, meaning **1 A-Buck always equals \$1**.
- **How to Buy:** The process is instant. You simply hit a button to convert the USDC in your wallet into an equal amount of A-Bucks.
- **No Extra Fees from Us:** ATHL does not charge any fees to buy A-Bucks. If you convert 100 USDC, you will get exactly 100 A-Bucks.

Step 3: Buy Fan Tokens with Your A-Bucks

Now you're ready for the fun part!

- **Instant Purchases:** With A-Bucks in your account, you can buy fan tokens instantly. You don't have to wait for slow blockchain confirmations, and the token price you see is the price you get without any additional fees.

- **We Cover Gas Fees:** Just like with buying A-Bucks, ATHL covers the gas fees for all fan token purchases. This keeps the process simple and free of surprise costs.
 - **Secure Transactions:** For your protection, all fan token purchases are reviewed by our team for 48 hours to screen for any potential fraud or hack attempts before they are finalized on the blockchain. Once confirmed, the fan tokens are sent directly to your secure wallet.
-

Why does ATHL use A-Bucks?

We use A-Bucks for two main reasons: **Speed and Safety**.

1. **To Streamline Purchasing:** Requiring A-Bucks allows for instant transactions on our platform. It means we can lock in the token price for you the moment you click "buy," without waiting for a crypto transfer to be approved on the network. This creates a much smoother and more reliable user experience.
 2. **To Enhance Security:** By having users convert to A-Bucks first, we ensure that all third-party fees (from credit cards or crypto networks) are handled upfront and transparently. It also simplifies our ability to cover gas fees for you, making the platform more accessible for everyone.
-

Funding Fees

We believe in being upfront about any costs. While ATHL does not charge any platform fees when you add funds or buy A-Bucks, our third-party payment partners do have their own processing fees. Here's a simple breakdown to help you choose the best option for you.

Funding Method: Credit/Debit Card

- **Associated Fees:** A standard processing fee of **2.9% + \$0.30** is charged by our payment partner, Stripe.
- **Example Cost for 100 A-Bucks: \$103.20**

Funding Method: USDC via Stripe or Other Payment Processors

- **Associated Fees:** A reduced processing fee of **1.5%** is charged by Stripe for using cryptocurrency.
- **Example Cost for 100 A-Bucks: \$101.50**

Funding Method: Direct Crypto Transfer

- **Associated Fees: ATHL charges no fee.** You only pay the standard blockchain "network fee" required to send the crypto. This fee varies based on network traffic.

- **Example Cost for 100 A-Bucks: \$100 + Network fee (likely <\$0.10 for USDC)**

Key Takeaway: The most cost-effective method is typically a **Direct Crypto Transfer**, as network fees are often lower than card processing fees. Once your funds are in your ATHL wallet, we cover the gas fees for all on-platform activities

What are "A-Bucks"?

A-Bucks are the internal currency of the ATHL platform, used to purchase all fan tokens. Each A-Buck is valued at \$1.00 USD. We plan to replace A-Bucks with our official ATHL Coin after it launches on major exchanges, which is anticipated in Q4 2025.

When can I sell my fan tokens?

For any new token launch, there will likely be a 90-day period where tokens can only be purchased. After this period, open trading begins on the ATHL platform, and you will be able to sell your tokens.

Can I get a refund on fan tokens?

All fan token purchases are final and non-refundable. However, you have the option to sell your tokens on our platform once open trading begins (approximately 90 days after the token's initial launch).

How do I receive my fan perks or benefits?

Issuers receive the email addresses of their token holders. They will contact you directly via email to coordinate the delivery of any promised perks or benefits.

What happens if an athlete retires or a creator's project ends?

A fan token represents an issuer's **entire life journey**, not just a single season, project, or career. When an issuer's professional life evolves, the nature and narrative of their token evolve right along with it.

- **Careers Change, the Journey Continues** An athlete's retirement is often the beginning of a new chapter as a coach, commentator, or creator. A creator may finish one project and start an entirely new, ambitious one. Your token supports them through these transitions, allowing you to be part of their lifelong pursuit of new dreams.
 - **A Lifelong Financial Incentive** Issuers earn a **1% royalty on every trade** of their token, for life. This creates a powerful and permanent financial incentive for them to continue engaging with their community and supporting their token's value, no matter what they are doing professionally.
 - **The Token as a Legacy Collectible** Your token also serves as a digital collectible that proves you were a supporter during a key part of their journey. Like a rookie trading card of a Hall of Fame player, its value is tied to the career they *had* as well as the legacy they continue to build.
 - **Value Is Tied to the Person, Not Just the Job** Ultimately, a token's long-term value is decided by the issuer's ongoing engagement, their lasting impact, the strength of their community, and the token's fixed, limited supply.
-

What are the risks of buying fan tokens?

We believe in being transparent with our community. Buying, holding, and trading fan tokens involves financial risks, and it's important that you understand them before participating.

- **Market Risk:** The value of fan tokens is determined by supply and demand, just like any other asset. Prices can be volatile and can go down as well as up. There is no guarantee that a token's value will increase.
- **Issuer-Specific Risk:** A token's value is closely linked to the career, popularity, and engagement of the specific athlete or creator. A decline in their performance, a controversy, or a failure to engage with fans can negatively impact the demand for their token and, therefore, its price.
- **Value Can Go to Zero:** In a worst-case scenario, a token's value could drop to zero. You should never purchase more than you are comfortable losing.
- **Liquidity Risk:** To sell a token, there must be a buyer. For tokens of less popular issuers, it may be difficult to find a buyer at your desired price, or at all.

Please treat the purchase of fan tokens as a novel form of support and engagement, with the potential for financial risk.

Part 3: For Issuers - Athletes & Creators

How do I create an account to issue my own token?

To begin creating your own fan token, go to www.athl.live and select either "**Athlete**" or "**Creator**" to start the setup process.

You will be guided through two key steps:

1. **Build Your Profile:** This is where you tell your story. You will provide background information on who you are and what you do, describe your goals and how you plan to use the funds raised, and outline any specific benefits or perks you will offer to your token holders.
2. **Verify Your Identity:** To prevent imposter accounts and build trust with fans, you must authenticate at least two of your social media accounts during setup. These authenticated handles will be prominently displayed on your issuer profile, giving fans a clear and simple way to verify they are buying tokens from the real you. We currently offer the ability to authenticate social media accounts on Instagram, TikTok, YouTube and X.

Additionally, for easier access, you can use your social media credentials to log in to your ATHL account after it's been created.

Setting Your Fundraising Goal

You can set your initial fundraising goal to be anywhere from **\$100,000** up to a maximum of **\$10,000,000**.

This goal is important because it determines the **total number of tokens** that will be available for your fans to buy during the initial sale.

- A **\$10 million** goal makes 1 million tokens available.
- A **\$100,000** goal makes about 69,482 tokens available which is a much smaller, more limited number of tokens available.

How Token Pricing Works

This is the most important part: **the price of each individual token follows the same path, no matter what your goal is.**

Think of it like getting access to a **special presale**. The earliest supporters are rewarded with the lowest possible prices, and as more people buy in, the price gradually and predictably rises.

Here's how it works:

- The very **first** token sold is always priced at **\$1**.
- The **second** token is priced a tiny fraction of a cent higher.
- The **third** is a tiny fraction higher than that, and so on.

This system rewards your earliest supporters with the best prices. Your fundraising goal simply sets the "finish line"—it determines how many tokens can be sold before your initial sale is complete.

Can Issuers Change Their Fundraising Goal After Sales Begin?

Yes! You have flexibility. If you start with a smaller goal, like \$100,000, and see strong support from your fans, you can decide to increase your goal to a higher amount.

This can be done at any time **before** your token's initial 90-day sale period ends and open trading begins. Increasing your goal simply makes more tokens available for your fans to buy at the next price on the curve.

A Note on Setting Your Goal:

We encourage you to set the largest goal you are comfortable with. Don't be shy about aiming for the maximum of **\$10,000,000**.

Remember, this fan token isn't just for one season or one project or one year. It's designed to represent your **entire career and journey for the rest of your life**. Setting a larger goal gives you the most room to grow with your community over the long term and allows more fans to be part of your story from the beginning and buy in at lower prices.

What is the application and approval process for an issuer?

To maintain a safe and authentic environment, every potential issuer on the ATHL platform goes through a straightforward application and approval process.

1. **Account Creation & Social Verification:** The first step is to create an account and authenticate at least two social media handles. This provides an initial layer of identity verification.
2. **Manual Review by the ATHL Team:** Once the account is set up, our team conducts a **manual review** of the application. This crucial step involves two main checks:
 - **Authenticity Check:** We work to confirm that the applicant is the genuine individual they claim to be. This helps prevent imposter and copycat accounts.
 - **Compliance Check:** We screen the application for potential red flags to ensure it complies with our platform's terms of service. This includes checks to ensure applicants are not from restricted or banned countries.
3. **Approval:** After the application passes our review, the issuer is approved and can proceed with launching their fan token.

This vetting process is a key part of our commitment to protecting our community and ensuring that fans can confidently support legitimate athletes and creators.

How do I earn money as an issuer?

We know finances can be complicated, so we've made our system as simple as possible. Think of earning money on the ATHL platform in two phases: the big upfront income from your initial sales, and then a steady stream of income over time from fans trading your token, which are also called secondary sales.

1. The Upfront Money: Your Initial Token Sale

This is where you make the most money all at once.

- **What it is:** It's the money you get from selling your fan tokens for the very first time. Think of it like selling all the tickets to your first big game or concert
- **How it works:** You receive **80%** of the total money raised from this initial sale. The other 20% goes to the ATHL platform to cover operations, development, and referral fees.

Let's use an example: Imagine you are a creator named Alex. You launch your fan token and your supporters buy all of them, raising a total of **\$5,000,000**.

- Total Raised: \$5,000,000
- Your 80% Share: **\$4,000,000**
- ATHL's 20% Share: \$1,000,000

So, your initial launch has earned you a total of **\$4,000,000**.

2. The Long-Term Money: Royalties from Fan Trading

This is how you continue to earn money from fans trading your token.

- **What it is:** You get a small commission every single time one of your tokens is traded between fans on our platform. It's like getting a royalty every time a trading card with your picture on it is bought or sold.
- **How it works:** You receive a **1% royalty** on the value of every single trade.

Example: A fan sells your "Alex" tokens to another fan for **\$100**, and let's say that 2000 fans trade \$100 of your fan token on average every day

- Your 1% Royalty on a single \$100 sale: **\$1.00**
- Your daily royalty earnings on all 2,000 transaction: **\$2,000**
- Your 1% Royalty on all secondary transactions over one year: **\$730,000**

While \$1 USD for a single \$100 transaction might seem small, if your token becomes popular and is traded hundreds or thousands of times a day, these royalties can add up to a nice, steady stream of income. This rewards you for staying engaged with your community and keeping your token desirable.

How You Get Paid: Your Rolling Payout Schedule

To help you manage your earnings, we pay you a steady, growing monthly "salary" instead of a single lump sum. Since your initial token sales can happen over several months or even years, your monthly payout is designed to grow as your sales do.

- **How it Works:** Think of each month's sales as creating its own **separate 12-month payment plan**. These payment plans **stack on top of each other**, so your total monthly payment grows over time.
 - **Why we do this:** It creates a predictable and increasing income stream for you to budget with. It also keeps you more motivated to engage with your fans, which helps drive sales and keep your token valuable. Our platform is focused on fundraising and engagement, so we want issuers to remain engaged with getting their fans excited about their token.
-

Example: How Your Monthly Payout Can Grow

Let's walk through a three-month example for an issuer named Maya.

Month 1 of Sales:

- Maya sells enough tokens to earn **\$120,000** (her 80% share).
- This creates her first payment stream: $\$120,000 \div 12 = \$10,000$ per month.
- Her total monthly payout starting in Month 2 will be: **\$10,000**.

Month 2 of Sales:

- Maya has a great month and earns an additional **\$240,000**.
- This creates a *new*, second payment stream: $\$240,000 \div 12 = \$20,000$ per month.
- Her total monthly payout is now the sum of both streams: $\$10,000$ (from Month 1) + $\$20,000$ (from Month 2) = $\$30,000$.
- Her total monthly payout starting in Month 3 will be: **\$30,000**.

Month 3 of Sales:

- Her popularity explodes, and she earns another **\$360,000** this month.
- This creates a *third* payment stream: $\$360,000 \div 12 = \$30,000$ per month.

- Her total monthly payout is now the sum of all three streams: \$10,000 + \$20,000 + \$30,000 = \$60,000.
- Her total monthly payout starting in Month 4 will be: **\$60,000**.

In this way, your monthly income isn't static; it's a **rolling total** of all your previous sales success, paid out consistently over time. This is in addition to any 1% royalties you earn from fan-to-fan trading of your token.

Visualizing the Rolling Payout

This table shows how Maya's monthly payout grows based on her sales success over the first three months. For this example, we'll assume she stops making new sales after Month 3 to clearly show how the existing payment streams provide a steady income.

Income Source	Month 1	Month 2	Month 3	Month 4	Month 12
Issuer Token Sales Revenue	\$120,000	\$240,000	\$360,000	\$0	\$0
Payout for Month 1 Sales	\$0	\$10,000	\$10,000	\$10,000	\$10,000
Payout for Month 2 Sales	\$0	\$0	\$20,000	\$20,000	\$20,000
Payout for Month 3 Sales	\$0	\$0	\$0	\$30,000	\$40,000
Total Monthly Payout	\$0	\$10,000	\$30,000	\$60,000	\$60,000

As you can see, Maya's Total Monthly Payout grows significantly in the early months as new 12-month payment streams are added. After her tokens are fully sold out, it becomes a steady and predictable \$60,000 monthly income for the remainder of the year, all based on her early success.

How do issuers manage and deliver perks to their token holders?

We provide issuers with the data and tools necessary to manage their token holder community and deliver perks effectively. This is handled through a combination of on-platform data access and off-platform communication.

Token Holder Dashboard Each issuer has access to a dashboard containing detailed information about their token holders. This includes:

- Contact information (email addresses, social media handles)
- Token balance (current quantity of tokens held)
- Purchase details (time of purchase, total amount spent)

Downloadable Reports For easy management and record-keeping, issuers can download two key reports in spreadsheet format:

1. **Token Holder Summary:** A snapshot of all current token holders and their balances.
2. **Full Transaction History:** A detailed log of every buy/sell transaction for their token.

Communication and Perk Delivery Initially, issuers will use the contact information provided in their dashboard (e.g., email addresses) to communicate directly with their supporters and coordinate perk delivery.

In a future update, we plan to build integrated communication tools, such as the ability to mass email token holders directly from the ATHL platform.

The Pay-It-Forward Program: Unlocking Funds and Amplifying Talent

The Pay-It-Forward program is a core feature of the ATHL ecosystem, designed to reward collaboration and create a supportive community. By participating, you not only gain early access to your own funds but also play a direct role in the success of others.

The primary mechanic is simple: **issuers can unlock their own proceeds ahead of the standard schedule** by reinvesting a portion of their revenue into the fan tokens of other athletes and creators on the platform.

Beyond unlocking funds, the program has several key benefits:

- **The "Spotlight Effect": From Icons to Up-and-Comers** This is where the program's impact can be most dramatic. When an established star invests in an emerging talent, it provides more than just funding—it creates a massive burst of exposure and credibility. Imagine a superstar athlete like Tom Brady investing in a promising high school football player, or a world-famous musician backing an unknown artist. This powerful endorsement can instantly put a new issuer on the map, attracting significant media attention and a wave of new supporters.
 - **Peer-to-Peer Endorsement** The program also thrives on mutual respect among peers. A professional athlete can invest in a respected rival or a teammate they believe in. Likewise, a high school creator can support another creator in their field whose work they admire. These investments are powerful signals of trust that strengthen bonds within specific communities.
 - **Shared Success** By investing in others, you gain a stake in their journey. This offers a chance for financial upside if the issuer you support becomes successful. It also generates positive social media "chatter" and enhances your own brand by showing that you give back to the community that supports you.
-

How Do Athletes and Creators Provide Ongoing Value to Fans?

Issuers are encouraged to share their dreams, goals, and progress on social media and within their profiles on an ongoing basis to better illustrate how the platform is helping them. Issuers can offer benefits and update the benefits they offer at any time. Benefits can include exclusive content, access to events, zoom calls or anything else the issuer would like to offer. Maintaining engagement helps sustain and increase interest in the token and the platform overall.

Part 4: Platform Mechanics & Safety

ATHL Dashboard Navigation

Every user on the ATHL platform has a suite of dashboards to help them track their portfolio, referrals, and fan token performance. This guide will walk you through each section.

Issuer Dashboard (For Issuers Only)

If you are an athlete or creator who has launched a fan token, you will have access to a powerful Issuer Dashboard with the following sections:

- **Fan Token Stats:** This is your at-a-glance overview, showing the **current token price**, the number of **tokens sold**, the number of **tokens still available**, and the **token's status** (e.g., currently selling, paused, or sold out).
 - **Revenue Summary:** A simple breakdown of your earnings, showing your **Gross Revenue** (the total from sales), the **ATHL Fee** (our 20% platform fee), and your **Net Revenue** (the 80% you keep).
 - **Market Cap History:** A graph that visually tracks your token's total market value over time. Market cap is calculated as the number of tokens that all fans hold times the current price.
 - **Proceeds Projection:** A table that forecasts your monthly payouts. Since your earnings are paid out over the 12 months following a sale, this table shows the cumulative amount you can expect to receive each month for the next year.
 - **Transaction History:** A detailed log of every transaction involving your token, showing the **buyer/seller information**, the **quantity** of tokens traded, the **price**, and the **date**.
 - **Your Fans:** A list of everyone who currently holds your fan tokens, including their **name**, **email address**, and the **number of tokens they hold**. This is crucial for delivering perks and building your community.
-

Fan Dashboard (For All Users)

Because all users, including issuers, can buy fan tokens, everyone has a Fan Dashboard to manage their portfolio.

- **Portfolio Value:** A line chart showing the total value of your holdings (including crypto, A-Bucks, and all your fan tokens) and how it has changed over time.
 - **Wallet:** A detailed view of all your assets. It shows your cryptocurrency balances (like USDC and ETH), your A-Bucks balance, and a list of all the fan tokens you own. For each fan token, you'll see the **number of tokens held**, its **current value in USD**, and the **price change** over the last 24 hours.
 - **Watched Tokens:** A personalized list of issuer tokens that you are tracking but do not yet own.
 - **Transaction History:** A complete record of all your buy and sell orders, showing the **token name**, **quantity**, **price**, and **date** of each transaction.
-

Referral Dashboard (For All Users)

Every user has a Referral Dashboard to track their earnings from inviting new issuers to the platform.

- **Referral Code:** This section contains your unique referral link that you can share. When someone signs up as an issuer using your link, you become eligible for a commission.
 - **Referral Terms:** A simple reminder of the referral program's terms: you receive **2% of the referred issuer's initial token sales revenue**, up to a maximum payout of \$1,000 per referral.
 - **Referral Earnings:** This shows your **total earnings** from all referrals, along with a line chart tracking the growth of your referral income over time.
 - **Referral Transactions:** A detailed table of every commission you've earned, showing the **date**, the **issuer's name**, the **transaction details**, and the **commission you earned**.
-

How is the initial price of a fan token determined?

Initial offerings use a fixed step-up pricing model. The first token is sold at \$1.00 USD, and each subsequent token is priced fractionally higher until the final token in the offering is sold. This model is designed to reward early supporters as they get the lowest prices. Once the initial offering is complete, the token price will be determined by supply and demand in the open market.

Why Are Fan Tokens Fixed-Price at the Start?

The fixed step-up model promotes early adoption by starting at lower prices and gradually increasing. This helps issuers build momentum in fundraising and rewards the earliest buyers with the lowest prices. Buyers can hold tokens and resell them once trading opens.

Will fan token prices go up and down?

After the initial offering, token prices are determined by market forces (supply and demand). There is no upper limit on prices. Prices typically reflect the issuer's popularity, social media presence, attractiveness of the issuers' perks, and other factors. Prices can fluctuate, including downward, depending on market conditions.

How does ATHL prevent issuers from manipulating their token's price (a "rug pull")?

We have implemented several safeguards to protect the integrity of the market:

- **Revenue Incentive:** Issuers earn royalties from secondary sales, giving them a long-term financial incentive to promote their token, their mission and the perks they offer to token buyers for many years to come.
 - **Trading Limits:** Issuers are limited to purchasing a maximum of 0.1% of their own tokens
 - **Advance Notice:** Issuers must publicly disclose their intent to sell any of their personal tokens at least 3 days in advance.
 - **Limit Sell Orders:** Sales made by the issuer are executed as limit orders at or slightly above the last trade price, preventing their own sales from driving the price down.
 - **Circuit Breakers:** If a token's price drops more than 10% in a 24-hour period, trading for that token is automatically paused for 12-24 hours to prevent panic-selling and manipulation.
-

How secure is the ATHL platform?

Security is a top priority. Our protective measures include:

- **Exclusive Trading:** For at least the first year, ATHL fan tokens can only be traded on our platform. This creates a controlled environment and reduces incentives for external hacks.
- **Fraud Reversal Capability:** We review trades for 24-48 hours before finalizing them on the blockchain. This gives us a window to identify and reverse fraudulent transactions in the event of a sophisticated hack, ensuring users can be made whole.

- **Enhanced Security:** We use multi-signature wallets, conduct regular security audits, and perform real-time monitoring to protect the platform.
 - **Limit Sell Orders:** Sales made by the issuer are executed as limit orders at or slightly above the last trade price, preventing their own sales from driving the price down.
 - **Circuit Breakers:** If a token's price drops more than 10% in a 24-hour period, trading for that token is automatically paused for 12-24 hours to prevent panic-selling and manipulation.
 - **No Imposters & No CopyCats:** All issuers must authenticate their identity by signing in with and authenticating with one of the top 4 social media platforms, IG, X, TikTok, Youtube. Fans can then see the verified accounts to ensure they are buying tokens from the people they expect.
-

Part 5: Other Features

How does the referral program work?

Every user on the ATHL platform has a unique referral link, which you can find in your account settings. If you refer a new athlete or creator who signs up with your link and successfully launches a fan token, you will earn **2% of their initial token sales revenue**. The maximum payout is capped at **\$1,000 per referral**.

Here's an Example:

1. **Share Your Link:** You are a fan of a talented college basketball player named Jordan. You find your referral link in your ATHL profile and send it to him, suggesting he could use the platform to fund his offseason training.
2. **Successful Launch:** Jordan uses your link to create an issuer account and launches his fan token. He sets a goal to raise \$100,000 but he sells \$30,000.
3. **Calculate Your Reward:** Your referral reward is 2% of the total revenue raised.
 - $\$30,000 \text{ (Total Revenue)} \times 0.02 \text{ (2\%)} = \600
4. **Receive Your Payout:** A commission of **600 A-Bucks** (equivalent to \$600) is automatically credited to your ATHL wallet. You can use these A-Bucks to purchase other fan tokens on the platform or choose to convert them to USDC.

How the Payout Cap Works If Jordan had been a more established creator and raised \$75,000 from his initial sale, the calculation would be $\$75,000 \times 0.02 = \$1,500$. Because the payout is capped, you would receive the maximum reward of **1,000 A-Bucks** (equivalent to \$1,000).

What is the process if a fan doesn't receive a promised perk?

Our platform uses a market-driven approach to accountability. We believe an issuer's token price should be a direct reflection of the value they provide to their community—from their career success and community engagement to the fulfillment of promised perks.

Community-Driven Accountability Through the Market: ATHL does not directly mediate individual disputes over perk fulfillment. Instead, we empower the community to hold issuers accountable through their collective actions in the open market.

- If you feel an issuer is not delivering on their promises, the primary way to express this is by **selling their token**.
- This action, when taken by multiple dissatisfied fans, naturally affects the token's price. This creates a powerful and direct financial incentive for issuers to honor their commitments and maintain a positive relationship with their supporters.

The decision to buy, hold, or sell a token is the most powerful tool you have to influence an issuer's behavior and reflect your satisfaction.

Platform Intervention for Terms of Service Violations

While we don't handle individual perk disputes, we take violations of our **Terms of Service (TOS)** very seriously. If we receive multiple, credible complaints about an issuer engaging in behavior that violates our core rules (such as fraud or operating an imposter account), we will launch an investigation.

- If a serious violation is confirmed, we may **remove the issuer** from the platform.
 - In these extreme cases, any of the issuer's funds still locked by the platform may be used to provide a **partial refund** to their token holders.
-

How Is User Privacy Handled on ATHL?

Your privacy is a top priority for us. We are committed to protecting your personal information and being transparent about how it's used. To ensure the highest level of protection, our platform is designed to comply with the **General Data Protection Regulation (GDPR)**, one of the world's strictest privacy and security laws.

Here's what that means for you in simple terms:

For Fans: You Are in Control

Our privacy policy is built on the principle that you should have control over your information.

- **Clear Consent:** We will not share your personal information without your permission. When you decide to support an issuer by purchasing their token, we will clearly explain what information (like your email address for perks) will be shared with them and ask for your explicit consent to do so.
- **Transparency:** You have the right to know what data we collect and why. Our full Privacy Policy will always be easy to find and written in clear, understandable language.
- **Data Minimization:** We only collect data that is essential for the platform to function and for issuers to engage with and better connect to their supporters. We don't collect information we don't need.

For Issuers: Access with Responsibility

As an issuer, you receive data to help you build a direct relationship with your community.

- **What You Receive:** You will get access to information about your token holders, such as their email addresses and social handles, so you can deliver perks and communicate with them directly.
- **Your Responsibility:** This data is shared with you for the specific purpose of engaging with your supporters. We expect you to handle this information responsibly and respect your fans' privacy at all times.

In short, our approach is to treat your data with the highest level of care, give you control over it, and build our platform on a foundation of trust and security.

ATHL Trust & Safety Center

Our commitment is to build a platform where fans, athletes, and creators can connect with confidence. This Trust & Safety Center is a central resource to explain the measures we take to protect our community, ensure authenticity, and provide a secure environment for everyone.

1. Platform Security

We employ a multi-layered security strategy to protect your account and your assets.

- **Exclusive Trading:** ATHL fan tokens can only be traded on our platform, creating a controlled environment that minimizes external risks.
- **Fraud Reversal Capability:** We review trades before finalizing them on the blockchain, giving us a window to identify and reverse fraudulent transactions in the event of a hack.
- **Enhanced Security:** We use industry-standard security measures, including multi-signature wallets and regular security audits, to protect the platform.

2. Issuer Vetting & Authenticity

We ensure that you are supporting legitimate creators and athletes through a mandatory vetting process for all issuers.

- **Social Verification:** Issuers must authenticate their social media accounts, which are displayed on their profiles for you to see.
- **Manual Review:** Our team manually reviews every application to confirm identity, prevent imposter accounts, and perform compliance checks.

3. User Privacy & Data Protection

Your data is your own. Our privacy practices are designed to comply with GDPR, one of the world's strictest standards.

- **Fan Control:** We do not share your personal information (like your email for perks) without your explicit consent.
- **Transparency:** Our Privacy Policy clearly explains what data we collect and how it is used.
- **Issuer Responsibility:** Issuers who receive fan data are expected to handle it securely and respectfully.

4. Fair Market Practices

We have implemented several safeguards to promote a stable and fair market and prevent manipulation by token issuers.

- **Revenue Incentives:** Issuers earn long-term royalties from trading, incentivizing them to support their token's value.
- **Trading Limits:** We place limits on how many of their own tokens an issuer can buy or sell.
- **Circuit Breakers:** Trading is automatically paused if a token's price drops too quickly, preventing panic-selling and manipulation.

5. Dispute Resolution & Accountability

Our platform uses a market-driven approach to accountability.

- **Market as Feedback:** The primary way for fans to express dissatisfaction with an issuer is by selling their token, which directly impacts its market price.
 - **Platform Intervention:** We investigate and take action—including removal and potential refunds—in cases of serious Terms of Service violations like fraud.
-

How Can I Contact Support?

We're here to help! We offer two main ways to get the support you need, depending on your question.

For Quick Questions: Ask Our AI Assistant

For general questions about how the platform works, the fastest way to get an answer is by using our **AI Chatbot**. It's available 24/7 and can instantly help with most common inquiries.

For Specific Problems: Email Our Support Team

If you're experiencing an issue specific to your account, a transaction, or have a problem the chatbot can't solve, the best way to get help is by emailing our dedicated support team.

To help us resolve your issue quickly, please include the following in your email:

- A **detailed description** of the problem you're experiencing.
- One or two **screenshots** that clearly show the issue.
- Your **phone number** in case a quick call or text chat is the most convenient way to help you.

Support Email: support@athl.live

Our team strives to respond to all inquiries as quickly as possible, and you can typically expect a response within **24 hours**.

Glossary of Terms

- **A-Bucks:** The official internal currency of the ATHL platform, used to buy all fan tokens. 1 A-Buck is always equal to \$1 USD.
- **Circuit Breaker:** An automatic safety measure that temporarily pauses trading for a specific fan token if its price drops more than 10% in a 24-hour period.
- **Fan Token:** A digital asset representing a connection to a specific athlete or creator.
- **Gas Fee:** A fee required to conduct a transaction on a blockchain. ATHL covers gas fees for on-platform activities.
- **Issuer:** An athlete or creator who has launched a fan token on the ATHL platform. All Issuers can act as fans as well by buying other fan tokens.
- **Market Cap:** The total market value of an issuer's fan tokens (Current token price x total tokens that are in circulation through fan purchases).
- **Rug Pull:** A scam where a creator creates a lot of hype to get fans to buy their tokens, then sells their tokens suddenly which drives the price down and then abandons the project. ATHL has numerous safeguards to prevent this.

- **USDC (USD Coin):** A "stablecoin" cryptocurrency pegged to the U.S. dollar, used to load funds onto the ATHL platform.
- **Wallet:** A secure, digital account on the ATHL platform where you store your crypto, A-Bucks, and fan tokens.
