

ATHL North Star Executive Dashboard

Purpose

This dashboard is intended to be the CEO-level command center for ATHL. The goal is not operational monitoring or detailed analytics. The goal is to answer five executive questions:

1. Is the platform growing?
2. Is liquidity and trading activity healthy?
3. Are issuers succeeding?
4. Is the ecosystem financially sustainable?
5. Are trust, compliance, and activation improving?

The KPI selection below is based on:

- Current PostgreSQL schema and available dummy datasets
- Existing transactional and wallet data
- Issuer onboarding and verification flows already modeled
- Planned future ATHL business model and token marketplace vision
- Practical feasibility for the SQL-LLM project

The KPIs are grouped into:

- Active = can be built now from existing tables/data
- Blocked = strategically important, but missing required product capabilities, tracking, or data infrastructure

1. NORTH STAR METRICS (PRIMARY CEO VIEW)

These are the most critical executive metrics and should occupy the top section of the dashboard.

KPI	Status	Why It Matters	Current Data Availability
Gross Transaction Volume (GTV)	Active	Core indicator of marketplace activity and liquidity	transactions.total_amount_usdc
Monthly Active Traders (MAT)	Active	Measures ecosystem engagement and repeat activity	buyer_id / seller_id from transactions
Total Platform Revenue	Blocked	Ultimate business monetization metric	No platform fee/revenue table yet

KPI	Status	Why It Matters	Current Data Availability
Active Tradable Tokens	Active	Measures ecosystem breadth and marketplace health	tokens + transactions
Total Market Capitalization	Active	Measures token ecosystem value creation	tokens.current_price × circulating supply
Net New Users	Active	Core growth indicator	users.created_at
Active Issuers	Active	Indicates creator/athlete participation and supply-side growth	issuers + token activity
Token Liquidity Velocity	Active	Measures how frequently tokens circulate/trade	derived from transactions + wallet holdings
Retention Rate (30D/90D)	Blocked	Critical indicator of product-market fit	No event/session model yet
Revenue per Active User (RPAU)	Blocked	Monetization efficiency	Platform revenue unavailable

2. EXECUTIVE KPI GROUPS

A. Marketplace Health & Liquidity

These KPIs determine whether the ATHL token economy is functioning.

KPI	Status	Notes
Daily Transaction Volume	Active	Derived from transactions.timestamp
Monthly Transaction Volume	Active	Core trend metric
Total Transactions	Active	Basic marketplace activity
Buy vs Sell Ratio	Active	Market balance indicator
Secondary Market Share	Active	% of volume from secondary trading
Average Transaction Size	Active	Indicates user purchasing behavior
Average Token Price	Active	Aggregate ecosystem pricing trend
Token Price Growth Rate	Active	Momentum across tokens
Tokens With No Trading Activity	Active	Identifies dead marketplace inventory
Liquidity Concentration	Active	Measures whether few tokens dominate activity

KPI	Status	Notes
Top 10 Tokens Share of Volume	Active	Executive concentration risk metric
Wallet Concentration Ratio	Active	Whale ownership detection
Token Holder Distribution	Active	Measures decentralization of ownership
Trading Velocity per Token	Active	Indicates token engagement intensity
Failed/Reversed Transactions	Active	Reliability and trust metric
Market Spread / Bid-Ask Depth	Blocked	No order-book infrastructure yet
Slippage Rate	Blocked	Requires execution engine/order-book data
Liquidity Pool Depth	Blocked	Requires AMM/DEX infrastructure

B. User Growth & Engagement

These metrics determine whether ATHL is growing sustainably.

KPI	Status	Notes
Total Registered Users	Active	users table
New Users per Day/Week/Month	Active	Acquisition trend
User Growth Rate	Active	Executive growth trend
Active Buyers	Active	Users making purchases
Active Sellers	Active	Users selling tokens
Buyer-to-Seller Ratio	Active	Marketplace balance
Repeat Buyer Rate	Active	Early engagement proxy
Multi-Token Ownership Rate	Active	Indicates ecosystem exploration
Average Wallet Balance	Active	User financial participation
Funded Wallet Rate	Active	Wallets with positive balances
MFA Adoption Rate	Active	Security adoption
Verified Email Rate	Active	Trust & activation
DAU / WAU / MAU	Blocked	No event tracking/session data
Session Length	Blocked	Requires behavioral telemetry
Feature Adoption Rate	Blocked	No product analytics instrumentation

KPI	Status	Notes
Funnel Conversion Rates	Blocked	Missing event-based funnel tracking
Churn Rate	Blocked	Requires recurring engagement signals
Cohort Retention	Blocked	No activity-event framework yet
Referral Conversion Rate	Blocked	Referral IDs exist but referral events missing

C. Issuer Ecosystem Health

These KPIs are essential because ATHL depends on creator/athlete supply.

KPI	Status	Notes
Total Issuers	Active	issuers table
Verified Issuers	Active	identity + social verification
Issuer Verification Pass Rate	Active	Operational quality metric
Issuer Activation Rate	Active	Issuers with live token + activity
Token Launch Success Rate	Active	Issuers successfully minting/live
Average Revenue per Issuer	Active	issuer_daily_revenue
Top Issuer Revenue Share	Active	Concentration risk
Issuer Revenue Growth	Active	Marketplace expansion
Issuers With Zero Revenue	Active	Supply-side quality issue
Athlete vs Creator Split	Active	Strategic supply composition
Social Reach of Verified Issuers	Active	followers_count aggregation
Issuer Onboarding Completion Rate	Active	issuer_post_signup
Wallet Provisioning Success Rate	Active	issuer_post_signup
OAuth Verification Completion Rate	Active	issuer_post_signup
Time-to-Go-Live	Blocked	Missing lifecycle timestamps
Issuer Retention	Blocked	Requires longitudinal activity definitions
Issuer NPS / Satisfaction	Blocked	No feedback system
Fan-to-Issuer Engagement Rate	Blocked	No social/community interaction tracking

D. Financial & Business Metrics

These are the metrics most investors and executives will eventually optimize around.

KPI	Status	Notes
Total Token Sales Revenue	Active	tokens.total_revenue
Issuer Revenue	Active	issuer_daily_revenue
Revenue Growth Rate	Active	Time-series analysis
Average Revenue per Token	Active	Token monetization efficiency
Revenue Concentration	Active	Dependence on top issuers/tokens
Treasury Assets Under Management	Blocked	No treasury accounting tables
ATHL Platform Fee Revenue	Blocked	Missing fee tracking
Net Platform Revenue	Blocked	No expense/cost model
CAC	Blocked	No paid acquisition tracking
LTV	Blocked	Requires mature retention + revenue models
Gross Margin	Blocked	No infrastructure cost modeling
Burn Rate	Blocked	No finance/operational ledger
Runway	Blocked	Missing treasury/expense data
Revenue Forecast Accuracy	Blocked	No forecasting layer yet

E. Compliance, Trust & Risk

Critical for a tokenized marketplace.

KPI	Status	Notes
Identity Verification Pass Rate	Active	identity_verification
Social Verification Pass Rate	Active	social_verification
MFA Adoption	Active	users.mfa_enabled
Suspended/Restricted Accounts	Active	users.account_status
Failed Identity Checks	Active	fraud/risk monitoring
Reversed Transactions	Active	operational risk signal

KPI	Status	Notes
High-Risk Wallet Concentration	Active	concentration heuristics possible
Country Distribution	Active	geographic compliance view
AML/KYC Completion Rate	Blocked	No dedicated compliance workflow yet
Fraud Detection Score	Blocked	No fraud scoring system
Chargeback/Fraud Loss Rate	Blocked	No payment dispute system
Sanction Screening Coverage	Blocked	No sanctions integration
On-chain Risk Monitoring	Blocked	No blockchain analytics integration

3. RECOMMENDED CEO DASHBOARD LAYOUT

Section 1 — Executive Summary Strip

Top-row KPI cards:

1. Gross Transaction Volume
2. Monthly Active Traders
3. Total Market Cap
4. Active Tokens
5. Active Issuers
6. Net New Users
7. Total Token Revenue
8. Verification Pass Rate

Each card should include:

- Current value
- 7D/30D trend
- Delta vs prior period
- Sparkline

Section 2 — Marketplace Momentum

Visuals:

- Daily transaction volume trend
- Monthly transaction trend
- Token trading velocity trend

- Top tokens by volume
 - Secondary vs primary market activity
-

Section 3 — Growth Engine

Visuals:

- User growth trend
 - Geographic growth map
 - Buyer vs seller activity
 - Wallet funding distribution
 - Repeat buyer trend
-

Section 4 — Issuer Ecosystem

Visuals:

- Issuer activation funnel
 - Verification funnel
 - Issuer revenue leaderboard
 - Athlete vs creator segmentation
 - Issuers with highest engagement
-

Section 5 — Risk & Trust

Visuals:

- Verification pass/fail trends
 - Suspended account trends
 - Reversed transaction trends
 - Wallet concentration analysis
 - Geographic compliance exposure
-

4. RECOMMENDED NORTH STAR KPI FORMULA

The strongest current candidate for ATHL's North Star Metric is:

Token Economic Activity (TEA)

Definition:

Total monthly USDC transaction volume generated by active users across all ATHL tokens.

Reasoning:

- Captures both demand and liquidity
- Ties directly to network health
- Scales with issuer success
- Reflects real economic participation
- Harder to game than vanity metrics
- Aligns well with future platform monetization

Formula:

TEA = SUM(transactions.total_amount_usdc) WHERE status = 'COMPLETED' AND timestamp within selected period

Supporting guardrail metrics:

- Monthly Active Traders
- Active Issuers
- Token Liquidity Velocity
- Repeat Buyer Rate
- Revenue Concentration

5. MOST IMPORTANT BLOCKERS BEFORE FULL EXECUTIVE READINESS

These are the biggest data gaps preventing ATHL from operating with a mature executive BI layer.

Highest Priority Missing Data Systems

1. Product Analytics Event Tracking

Needed for:

- DAU/WAU/MAU
- Retention
- Funnels
- Session analytics
- Feature adoption
- Churn

Recommended tools:

- Segment
 - RudderStack
 - PostHog
 - Mixpanel
-

2. Platform Revenue Ledger

Needed for:

- Platform revenue
 - Fees
 - Margin
 - LTV
 - Financial forecasting
-

3. Treasury & Accounting Layer

Needed for:

- Runway
 - Burn rate
 - Treasury health
 - Cash management
-

4. Marketplace Order Book / AMM Data

Needed for:

- Spread
 - Slippage
 - Liquidity depth
 - Price efficiency
-

5. Community & Engagement Layer

Needed for:

- Fan engagement
- Creator-fan interaction
- Referral effectiveness

- Social virality

6. PRIORITIZED MVP KPI LIST FOR THE FIRST VERSION

If the SQL-LLM dashboard must launch quickly, these should be prioritized first.

Phase 1 MVP KPIs

1. Gross Transaction Volume
2. Monthly Active Traders
3. Total Token Revenue
4. Active Tokens
5. Net New Users
6. Active Issuers
7. Verification Pass Rate
8. Daily Transactions
9. Repeat Buyer Rate
10. Token Liquidity Velocity
11. Top Tokens by Volume
12. Wallet Funding Rate
13. Issuer Revenue Trend
14. Revenue Concentration
15. Suspended Accounts

These are all feasible today using the existing schema and dummy data.

7. TABLES CURRENTLY MOST IMPORTANT FOR DASHBOARDING

Table	Importance
transactions	Core marketplace activity
tokens	Token economics
users	User growth & security
issuers	Supply-side ecosystem
issuer_daily_revenue	Revenue reporting
user_wallet	Wallet funding & balances

Table	Importance
user_token_wallet	Ownership distribution
identity_verification	Compliance/trust
social_verification	Issuer quality
issuer_post_signup	Activation funnel

8. FINAL RECOMMENDATION

For ATHL's current stage, the executive dashboard should emphasize:

- Liquidity
- Marketplace activity
- Issuer ecosystem growth
- Trust/compliance health
- Early engagement indicators

It should avoid over-indexing on:

- Traditional SaaS retention metrics
- Deep cohort analytics
- Revenue margin metrics
- Advanced forecasting

Those systems require event instrumentation and financial infrastructure that do not yet exist.

The most strategically important near-term investment is implementing a complete behavioral event-tracking layer. Without it, ATHL will be able to measure transactions, but not actual product engagement or retention behavior.
